

DONOR ELIGIBILITY SYSTEM

BY EVERSANA™

The Donor Eligibility System is an automated, web-accessible platform that assists in the donor eligibility determination process. This system is specifically designed to provide tissue organizations with the ability to fully automate the donor eligibility process in a way that is not only compliant with FDA 21 CFR 1271 but also speeds up eligibility determination, reduces cost and allows clinicians more time for delivery of patient care.

Key Features

- Easy-to-use customer interface.
- Comprehensive dashboard that allows clinicians to track donors through the donor eligibility process.
- Customizable questionnaires that may be sent to donors prior to their clinic appointment.
- Configurable workflows, including approval steps, that align the system with your individual processes.
- Management of donor records across multiple locations.
- Seamless updates and software validation to reflect FDA changes to regulation and guidance documents.

40%
reduction in time spent managing donor eligibility data

60%
average reduction in cost when compared to developing proprietary solutions

120+
successful FDA inspections

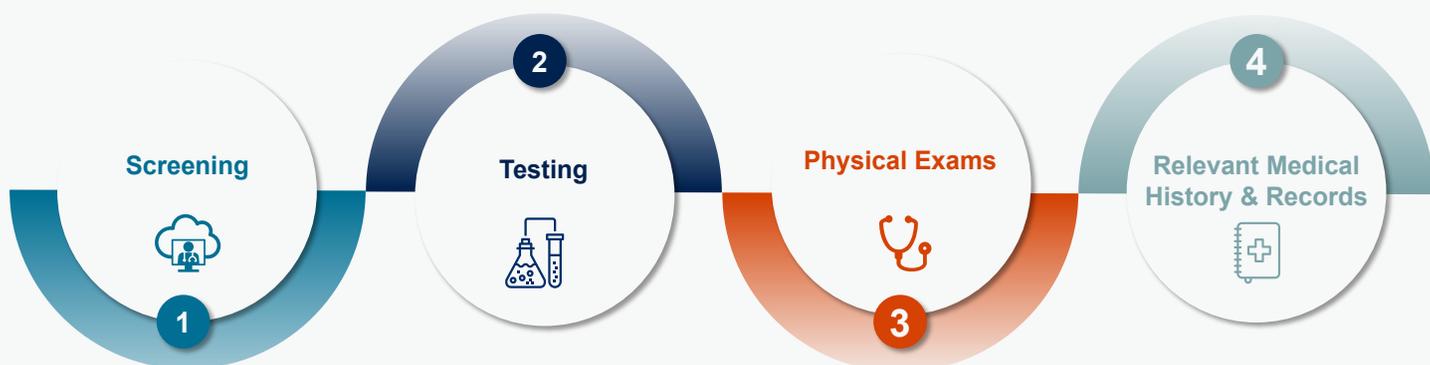

15
number of years the Donor Eligibility System has been successfully operating and supporting clients

The EVERSANA Difference

- 1. Best-in-class customer service:** Experience hands-on, boutique-level customer service from our team of experts specializing in tissue regulation and FDA software requirements.
- 2. Systems, maintenance, and validation administration:** Access to the Donor Eligibility System includes the support of our experienced systems and IT administrators, quality assurance support and ongoing software validation that is compliant with 21 CFR Part 11 and ongoing system audits.
- 3. Zero capital cost:** The Donor Eligibility System is a secure, cloud-based platform built on a subscription model so there are no required software purchases.
- 4. Automated workflows:** Workflows integrated into the Donor Eligibility System ensure all required steps are complete in order to sign the eligibility determination, reducing the margin of error.
- 5. Peace of mind:** Our team of regulatory experts are constantly monitoring FDA regulatory changes, updating screening and testing elements as appropriate so you can focus more on patient care.

Our system incorporates input and data from multiple sources to successfully manage the following:

Electronic questionnaires are utilized to comply with FDA screening requirements. Clinics with supplementary screening requirements can add in customized questionnaires. Donors are able to respond to questions based on the type of tissue being donated.

Testing panel results are entered into the system by assigned personnel with permissions-based access. Clients may add custom fields such as additional infectious disease tests performed, state or country-specific testing requirements and more. The system ensures all required tests are reported appropriately.

Results of physical exams are entered either during the exam or at the conclusion by personnel with permissions-based access. Additional fields may be added to the physical exam to meet client-specific needs.

Additional medical history and records that include relevant information about the donor may be added to a file as attachments.
